

# Climbing French Purple Bean Blauhilde

**Latin Name**

Phaseolus vulgaris

**Pack Size**

Approx. 50 Seeds

Climbing French Purple Bean Blauhilde is a unique variety of French climbing bean. Produces purple pods that can be harvested for long periods, from summer to mid-autumn. Can be eaten fresh or cooked, where they will change colour to a dark green! Will also produce purple flowers.

**Sow Indoors**  
 April-June

**Sow Outdoors**  
 May-July

**Harvest**  
 July-October

## Sowing Instructions

Will take roughly 7-14 days to germinate. Planting each seed roughly 2 inches below soil level, spacing each row about 18 inches apart. Ensure the location is nice and sunny.

**Days to harvest to maturity**

70 days.

If you prefer an early crop sow mid-spring, roughly 6 weeks before the last expected frost in your area. Otherwise sow outdoors, spacing them 4-6 inches between each seed when the soil has warmed.

**Tips**

Loosely tie young plants to supports to aid their growth.

These plants prefer warm conditions and may struggle in the cold ground. Will not need staking to grow.
