Sowing Instructions

To start seeds off early in spring, place a seed sideways 1cm deep in seed compost in a small seed pot.

The critical part is temperature - they prefer warm conditions until germinated. Germination usually takes around 7-10 days. Keep the soil moist but try to water around the plants, not over them.

Keep soil weed-free to allow air circulation. Feed regularly with a high potassium fertiliser when the first fruits start to appear.

Days to harvest to maturity

50-60 days.

Tips

Pick the courgettes when they're young and tasty (10cm). This is when their flavour is the most concentrated.
