

# Kale Borecole Siberian

**Latin Name**

Brassica oleracea

**Pack Size**

Approx. 500  
 Seeds

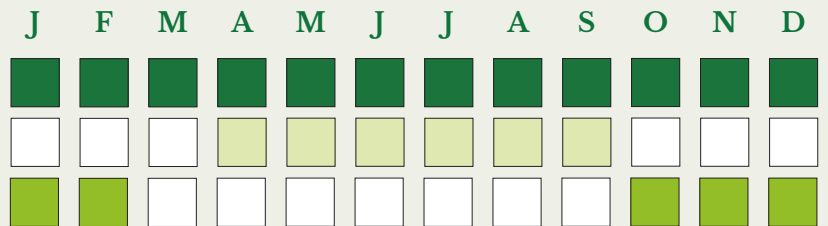

Kale Borecole Siberian produces large green leaves with ruffled edges, a perfect choice for sowing all year round. This variety is one of the most frost hardy of its kind. In fact, the frost can improve the flavour of this Kale, making it sweeter to taste.

**Sow Indoors**  
 January-December

**Sow Outdoors**  
 April-September

**Harvest**  
 January-February/  
 October-December

## Sowing Instructions

This seed can be sown all year round indoors. Sow outdoors from April to September. Sow 1-2cm deep, 1cm apart in rows and spaced 50-60cm apart.

Thin seedlings to 20-25cm apart when transplanting. Kale germinates best in cooler to mild soil temperatures with even moisture. Choose an area that reaches plenty of sun and has a soil pH of 6.0-7.0.

If needed, enrich the soil with compost or well-rotted manure. Harvest by clipping individual leaves toward the base.

**Days to harvest to maturity**

55-65 days.

**Tips**

Cover the plants with fleece or netting to stop birds and insects from ruining the leaves.
