

Squash – Delicata Honeyboat

Latin Name

Cucurbita pepo

Pack Size

Approx. 10 Seeds

Squash Delicata Honeyboat is even sweeter than most butternut squash varieties! Produces impressive long fruits in pale yellow and dark green stripes. But, these stripes fade when the fruits are ready to harvest. Can be stored easily, perfect for all kinds of recipes.

Sow Indoors

April-June

Sow Outdoors

April-June

Harvest

August-October

Sowing Instructions

Ensure plants are grown in a sunny spot that's protected from strong wind. Grow in humus-rich soil that's well drained.

Sow seeds indoors from April to June, 2cm deep. Put them in a propagator, or keep somewhere warm - a sealed bag can work wonders (21 degrees). Avoid sowing in cold conditions.

Acclimatise outside for a few days before planting out after all risk of frost has passed. Space 1.2m apart.

Days to harvest to maturity

100 days.

Tips

If you're tight for space, turn the branches back to the centre to prevent over-spreading.
