Sowing Instructions

Swiss chard doesn't transplant well, so we recommend planting them directly outside.

Sow 6 seeds per foot as soon as the soil can be worked in early spring to summer. Cover seeds with 1/2 inch of soil. Thin seedlings roughly 8-12 inches apart.

Cut outer leaves when the plants are 8 inches tall for an extended harvest, as the leaves grow from the centre. Cut back plants in late summer.

Days to harvest to maturity

55 days.

Tips

Swiss chard is frost-hardy, and can be harvested well after the first frost in winter.
